25

projectile relative to a trailing projectile upon application of an axial compressive load to said plurality of projectiles.

- 13. The barrel assembly of claim 11 wherein propellant charges are in solidified form.
 - 14. The barrel assembly of claim 11 wherein properlant charges are in a flowable form.
- 15. The barrel assembly of either claim 13 or plaim 14 wherein the rearward opening includes a closure for retaining the propellant material within the cavity.
 - 16. The barrel assembly of claim 15 wherein the closure comprises a burstable disc or a disc composed of combustible material.
 - 17. The barrel assembly of claim 16 wherein said closure includes retaining means for releasable engagement with complementary retaining means on the head portion of an adjacent projectile assembly.
- 20 18. The barrel assembly of claim 17 wherein said complementary retaining means include a socket member and a spigot member.
 - 22. The barrel assembly of claim 17 wherein said complementary retaining means include cooperating screw threads to facilitate release.
 - 20. The barrel assembly of claim 17 wherein the retaining means is frangible.
- 21. A projectile assembly having a body with a head and a tail portion, said projectile assembly characterised in that:
 - the head includes a forward portion arranged for operative sealing engagement with the rearward opening of a leading projectile;

5

20

the tail portion includes a rearward opening communicating with a cavity provided in the projectile assembly for receiving the discrete propellant charge, which opening includes a rear portion arranged for operative sealing engagement with the forward portion of a trailing projectile; and

- a sealing arrangement being such that, during the application of a compressive load to abutting projectile assemblies, the discrete propellant charge is sealed within the cavity.
- 22. A chain of projectiles including at least two projectiles assemblies coupled together by a coupling, wherein each projectile comprises a head portion and a tail portion and wherein the coupling comprises a complementary spigot member and socket member, which coupling is disposed between the tail portion of a leading projectile and a head portion of a trailing projectile.
- 15 23. The chain of projectiles as claimed in claim 22 wherein the spigot member and socket member of the coupling are provided with releasable engagement means.
 - 24. The chain of projectiles as claimed in claim 22 wherein the coupling includes frangible retaining means.
